Earthea Nance, PhD, PE
Regional Administrator, Region 6

Dear Dr. Nance,

It is imperative that we protect front-line communities and the land surrounding LANL from the proposed tritium venting project. We will not accept any further contamination of our air and environment. Exposure to radioactive chemicals can result in significant and irreversible harm to internal organs, overall health, and quality of life, particularly for a young child or infant.

Please deny Los Alamos National Lab's application to vent tritium from the waste containers at Area G. It's also important to include "infants and children" as members of the public in the Clean Air Act Regulation (40 CFR 61, Subpart H).

In collaboration with Tewa Women United, New Mexico Environmental Law Center, and the Institute for Energy and Environmental Research, I strongly ask for your protection of ALL our residents.

Sincerely,

[name]

[address, include city and state]
