Theodore 'Ted' Wyka, Environmental Manager
National Nuclear Security Administration
Los Alamos Field Office

Dear Mr. Wyka,

It is imperative that we protect front-line communities and the land surrounding LANL from the proposed tritium venting project. We will not accept any further contamination of our air and environment. Exposure to radioactive chemicals can result in significant and irreversible harm to internal organs, overall health, and quality of life, particularly for a young child or infant. .

I urge you to enforce Los Alamos National Lab's adherence to DOE Order 458.1, with the aim of keeping radiation exposure rates "as low as reasonably achievable." It is crucial to include infants and children in the public when calculating radiation doses. Moreover, LANL should be required to make its list of 53 alternatives to tritium venting publicly available, ensuring transparency and public awareness.

In collaboration with Tewa Women United, New Mexico Environmental Law Center, and the Institute for Energy and Environmental Research, I strongly ask for your protection of ALL our residents.

Sincerely,

[name]
